Hi...

I'm Juergen, scroll down for a captivating story...

I'm Juergen, a passionate software engineer, designer, product owner, and creator. My career journey has been anything but ordinary. It's a story of resilience, learning, and an unwavering commitment to growth and excellence, even when the odds were stacked against me.

My story began in South Africa, having moved from Zimbabwe at a young age, where I started to build my career in Cape Town. I taught myself the skills necessary to thrive in fast-growing, challenging companies, despite being younger than many of my peers in the industry. The journey was not without obstacles, but I persisted and excelled beyond expectations. One of my most significant accomplishments during this period was launching an application that reached over 20,000 users within just three months. I also helped grow an application to over €56,000 in daily transactions. All of the experiences there instilled within me the importance of adapting, learning, and embracing new opportunities.

In Germany, I joined MHP, one of the top consulting firms, where I designed and implemented cutting-edge software solutions for the automotive sector. I worked on the MyPorsche platform, creating after-sales solutions that directly impacted Porsche owners' experiences. The environment at MHP sharpened my technical and leadership skills, allowing me to collaborate with talented individuals and contribute to high-impact projects.

But my dream didn't stop there. I wanted to make Switzerland my home, and I made it a reality. Relocating was a significant life challenge, but I embraced it wholeheartedly. I immersed myself in the Swiss culture, continued to learn the language, and integrated into the community, all while continuing to grow professionally.

Through it all, I've learned valuable life lessons about perseverance, the power of self-education, and the importance of embracing change. These experiences have shaped me into a product-focused software engineer who takes ownership from idea to completion. Whether designing intuitive user interfaces, improving architecture, or experimenting with new frameworks, I approach each challenge with a determination to create an engaging experience.

In my role at Juice Technology AG, I led the development of multi-platform applications, improving user experiences and boosting app ratings from two stars to four in just four weeks. I also introduced quality assurance guidelines, reducing production bugs and improving team efficiency. My experience at MHP and various startups has given me the skills to navigate complex projects and deliver outstanding results.

I'm excited about the opportunity to bring my diverse skills and experiences to your team. I am confident that my background in overcoming challenges, adapting to new environments, and consistently delivering high-quality solutions makes me a strong candidate.

Thank you for considering my application. I look forward to the possibility of contributing to your organization's success.
